

High telecom costs due to employees in the field and home offices?

4your mobile communication

- Employees in the field and working from home don't have to mean high telecom costs
- ECOTEL® VoIP provides rapid, significant savings
- Connect via VPN or the Internet

ECOTEL® VoIP

ECOTEL® VoIP lets you get a handle on rising costs

Companies that have large numbers of employees working in the field, at home, or in smaller branch locations need no longer resign themselves to high telephone bills. The ECOTEL® VoIP GSM gateway can solve the problem.

Integrated with the ISDN PBX via a VPN

Many companies use a VPN (Virtual Private Network) to connect their employees in the field or working from home offices to the company network. If the company network also has an ECOTEL® VoIP installed, these employees can log in as VoIP subscribers with the gateway's SIP server. This provides a simple way for them to connect to the central ISDN telephone system from the external workplace. Calls are made using an easy-to-install SIP phone, which allows connections to other company employees to be made free of charge.

Using GSM gateway functionalities

Employees can also take advantage of ECOTEL® VoIP's

GSM gateway functionalities, which allow particularly cost-effective calls to be made to mobile subscribers. The employee uses the free VoIP connection to the gateway, and a subsequent wireless network-internal mobile-to-mobile connection.

Maximum potential for calling abroad

For colleagues working in other countries, the connection using VoIP and the VPN is particularly efficient. The colleague abroad can use the connection to the ECOTEL® VoIP to place calls to the home-country fixed network at domestic rates. Calls to the GSM networks at the home location are made as low-cost network-internal mobile-to-mobile connections. Calls to colleagues at the home location are free of charge.*

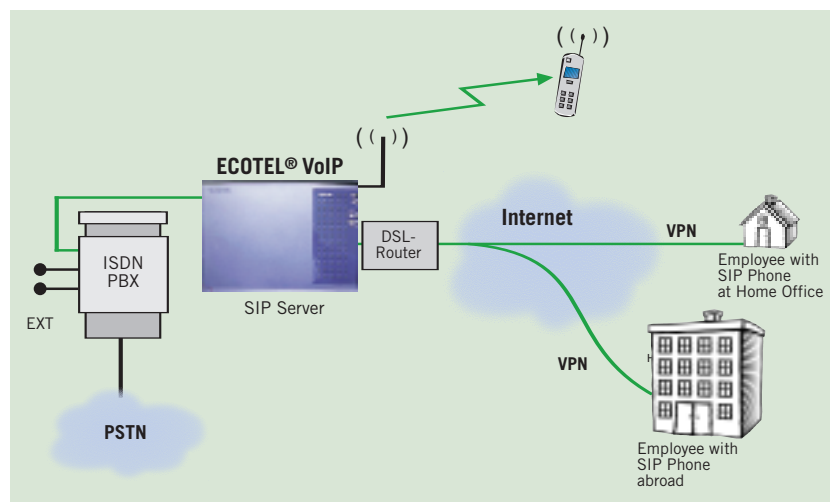

* Please pay attention to possible online costs

APPLICATIONS

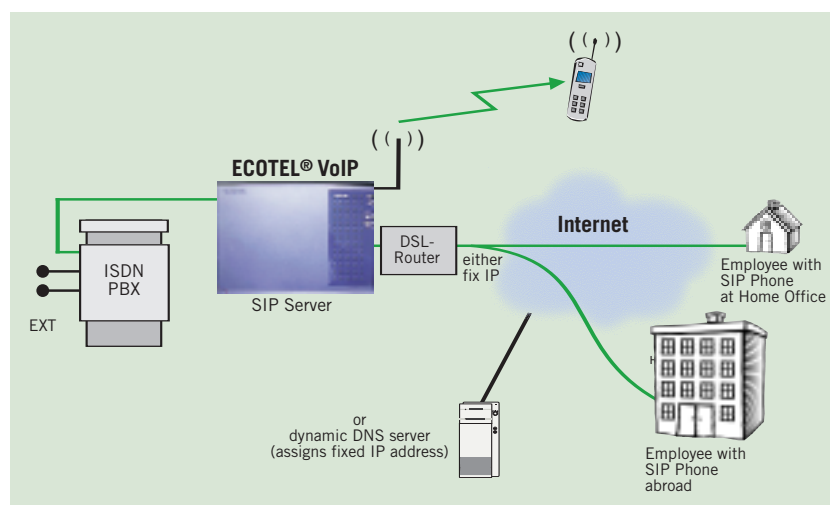

ECOTEL® VoIP - the cost-cutter for communicating with out-of-office employees

ECOTEL® VoIP amortizes quickly for companies that have employees working in the field, from home, or in small branch offices. The connection is especially simple if your company has a VPN.

Connection via VPN

If a VPN is not in use, the gateway requires a fixed IP address by which it can be unambiguously identified. If this is not possible, dynamic DNS servers* are available that assign a unique address to the gateway.

Connection without VPN
