

Mobile Integration with Teleserver Mobile Pro

VIERLING ECOTEL® VTM pro and SPEECH DESIGN Teleserver Mobile Pro as a package

4yourmobile
communication

- Fixed-line phone and mobile phone can be reached at a single number
- Transfer calls from a mobile phone
- Initiate conferences from a mobile phone and arrange call forwarding
- Common mailbox for fixed line and mobile phone
- Recording of telephone conversations
- Employees can save valuable time
- VTM pro helps build an economical solution

Extension goes mobile!

SPEECH DESIGN's Teleserver Mobile Pro turns any phone into a mobile extension. Your employees can be reached wherever they go at a single extension. They can also transfer calls from a mobile phone and set up conference calls. Call forwarding can be switched on and off from on the road without incurring any charges. A common mailbox is provided for the fixed line and mobile phone which can also be accessed from a PC. Using a memo function, employees can record calls from a mobile phone. – This helps your employees to save time while boosting productivity!

GSM connection required

Until now, users of Mobile Pro incurred additional charges for calling GSM networks. For example, if a client dials the fixed line of an employee, the phone at the employee's desk will ring, as will the mobile phone. If the employee takes the call on the mobile phone, charges will be incurred between Mobile Pro and the GSM network.

Teleserver
Mobile Pro

Cost-effective mobile integration

Here is where ECOTEL® VTM pro comes into play: The gateway can reduce the cost of connecting to the GSM network by replacing expensive calls from fixed lines to mobile phones with more cost-effective mobile-to-mobile calls. The gateway has its own mobile radio modules and can be fitted with SIM cards from different carriers. Depending on the rate for the SIM cards that are used, calls will be either free or considerably less expensive.

VIERLING

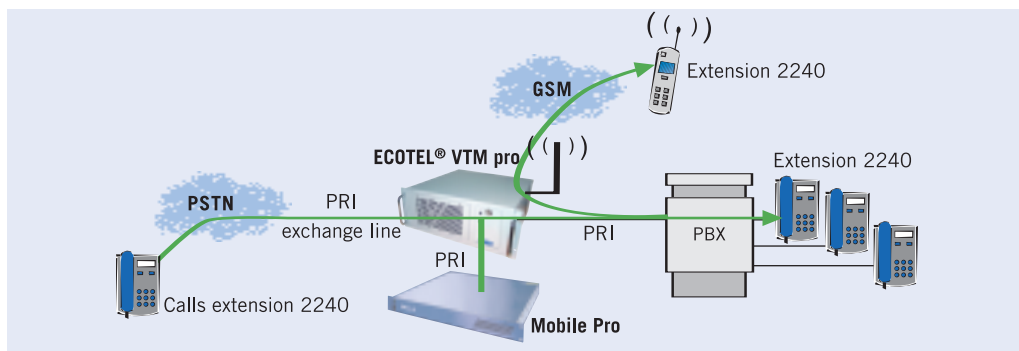

A cost-effective solution with ECOTEL® VTM pro

For more than just mobile phones

SPEECH DESIGN's Teleserver Mobile Pro is capable of integrating mobile phones as well as private phones and IP phones into a company's PBX. Here, ECOTEL® VTM pro works as a least cost router. The gateway automatically recognizes the connection type and chooses the most cost-effective route via GSM, VoIP or ISDN. ECOTEL® VTM pro is looped into the exchange line and all incoming and outgoing calls are routed via ECOTEL® VTM pro in a cost-effective manner.

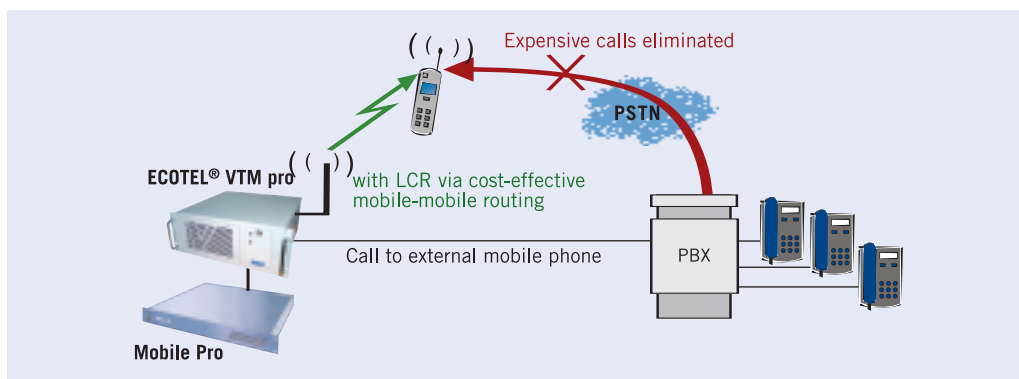

Without ECOTEL® VTM pro: The mobile phone and the fixed line phone both ring. If the employee takes the call on the mobile phone, high connection charges are incurred unnecessarily

With ECOTEL® VTM pro: Connection charges for GSM networks are significantly decreased with mobile-to-mobile call routing

Integrated Least Cost Routing

It is also possible to save mobile communication fees if you call external mobile phones. Depending on the called phone number, provider, day time or weekday, ECOTEL® VTM pro establishes the most cost-effective mobile connection.
